

Ovesco Endoscopy opens new company headquarters in the Tuebingen Technology Park

The medical technology company located in Tuebingen will officially inaugurate its new building in the presence of invited guests. With 5,200 m² floor space and 29,000 m³ construction volume the new building leaves room for further growth

Tuebingen, October 10.2019, 18.00, Ovesco Endoscopy, Friedrich-Miescher-Str. 9, 72076 Tuebingen

Ovesco Endoscopy AG is a medical technology company active in flexible endoscopy and endoluminal surgery. The company develops, manufactures and distributes products for the treatment of gastrointestinal diseases. Ovesco's trademarks are innovative endoscopic intervention systems. After almost 15 years in Tuebingen-Lustnau, Ovesco is now moving into its own company headquarters in the Tuebingen Technology Park and thus stays abreast of the continuing corporate growth. In the new building, planned and constructed by Metaraum Architects, Stuttgart, all business functions are under one single roof, from research and development to production and logistics as well as marketing and distribution.

Ovesco has locations in Germany, France, India, and the USA. Patients are treated with Ovesco products in more than 70 countries. Internationality is thus an important part of Ovesco's corporate structure.

Ovesco was able to win member of the Bundestag Annette Widmann-Mauz, Minister of State for the Federal Chancellor, as keynote speaker for the festive opening. She will speak on the subject of

„Internationality as basis for economic and social success“

The following guests of honor will also speak at the opening:

- Thorsten Flink, Buildings Department and Economic Development of the city of Tuebingen
- Prof. Dr. Jürgen Hochberger, Head Physician of the Department of Gastroenterology, Klinikum Friedrichshain, Berlin
- Prof. Dr. Michael Auer, CEO, Steinbeis-Foundation for Economic Development
- Joachim Walter, District Chief Executive, Administrative District Tuebingen

About Ovesco Endoscopy:

Ovesco rates product innovation as one of its core competences. prognos and the F.A.Z-Institute list the medical technology company as one of Germany's innovation leaders. This again confirms the research strength of the Tuebingen company, which has repeatedly received national innovation and industry awards, among them the prestigious innovation award of the state of Baden-Wuerttemberg, the Dr.-Rudolf-Eberle-Award, in 2017.

For Ovesco, the cooperation with leading physicians in science and continuing education is of outstanding importance.

As a research-driven medical technology company, Ovesco is in permanent cooperation with clinicians with regard to new product ideas, clinical studies, and the introduction of new procedures into continuing medical education. Maintaining this special culture of cooperation is not only a management task, but applied practice of many employees throughout the company.

A new training center where the the new interventional techniques can be learned is an important part of the new building.

The Ovesco team is fully committed to develop products of outstanding quality and exceptional medical benefit and introduce them into clinical practice. Users confirm that the OTSC Clip has made an important contribution to modern interventional endoscopy and created new options in patient care. The FTRD-Resection System first made it possible to resect small intestinal tumors not just superficially, but with the entire diseased intestinal wall, thus often sparing patients an operation.

The new „Ovesco Campus“ does not only accomodate Ovesco itself, but also the sister companies novineon and Tuebingen Scientific, which had already been next door at the previous location. Thus more than 100 persons are already working together in the same building.

While novineon deals with clinical product certification for medical technology companies in Europe and the USA, Tuebingen Scientific produces instruments for surgical robotics.
